

Flat Earth      where is the sun?

How high do planes fly?

7 miles

less than 100 miles

3000 miles

(never changes)?

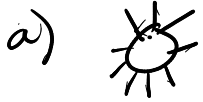

more than 100 miles

Q: Can a commercial airliner fly higher than the sun?

A: NO!

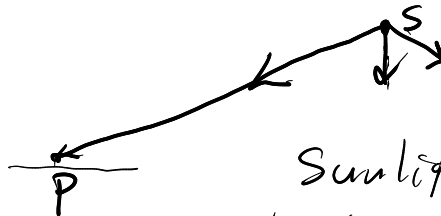

Both camps agree that you cannot fly over the sun.

diameter of Earth disc

no sunlight reflecting off the bottom of the airplane

b)

Sunlight always hits the plane from above in this model.

From an airplane you never have to look down to see the sun.

The sunlight should never reflect off the bottom of an airplane.

This must be true!
